General	Language	English, Spanish, Portuguese, Russian, French, German, Italian
Technology	Field based deltas	We use highly optimized data exchange that only sends detlas field by field. This makes it super fast and users do not have to wait for data exchange.
Technology	Google Cloud	VisitBasis is running on Google Could platform, it does not use SQL like databases allowing to have the best performance and scalability compare to tranditional web-based systems.
Technology	High perfomance globally	As Google Cloud implementations you can count on best service avaialbilty even if your company is multinational and runs in different countries and time zones.
Technology	Progressive data uploads/downloads	VisitBasis is desgined to work under all communication conditions. The data is broken into multi-packets and send in separate threads simulaniously. If connection breaks the system needs to resend only the lost packets. Result you do not need to wait data to be resent to you.
Technology	Retry and recovery	Smart retry and recover strategies used to allow the data exchange after the connect drop. So you never have to retry the synching as system will do all the hard work for you.
Technology	Top performance	VisitBasis uses highly compressed binary AMF3 protocol over SSL for fast and secure comminucation with Cloud based service.
